

Incident Command Systems for Community Responders

Incident Command Systems is the process used by first responders to coordinate disaster response. Scalable from 1 to 1 million responders, ICS helps organize a disaster or any project - bringing order from chaos.

This 2 part learning opportunity will start with an interactive overview of the principles and procedures used in ICS. This section will be recorded for sharing. Session Two will be an in person opportunity to practice using the Incident Command System with your community response group. Attendees of session 2 will need to have attended or watched session 1.

Seating is limited to
25, please pre-register
